A simple automated imposition workflow solution for digital printing, CtP, CtF

QuickFACTS

- Compatible with OS 10.4 (Tiger) and Acrobat 7
- Ideal solution for Print On Demand/Digital Printers
- Supports all bindery requirements: saddle stitch, perfect bound, Cut and Stack, Repeating Booklets (Digital only), punch for wire-O and spiral bound, right side and calendar binding
- Supports latest digital presses and CtP from:
 - AB Dick/Presstek, HP Indigo, Xerox, NexPress, Xeikon, Konica-Minolta, Canon, Heidelberg DL...
- On the fly collating marks placement
- Max output size 30" X 30" (760mm X 760 mm)
- Input: PS, PDF, EPS, TIFF
- Output: PS, PDF, JDF
- Automated Best-Fit workflow
- Origami virtual paper folding for easy template making
- Dynamic templates: same template for multiple jobs (Digital only)
- FREE QuickStart training video

With our free QuickStart video you'll be imposing files in a snap!

SIMPLE automated or manual imposition workflow

Regardless if you are a prepress pro or just starting in printing, Impostrip On-Demand eases you into the world of imposition. Designed with a simple user interface, in a few quick mouse clicks you can set-up an On-Demand imposition workflow for computer-to-plate, computer-to-film or digital printing.

Supports your files & your customers' files

On-Demand imposes PostScript, EPS, TIFF and PDF files. With over 150 PostScript filters, including latest QuarkXPress, Adobe Acrobat, Illustrator & InDesign CS, you can throw almost any job at Impostrip On-Demand; Macintosh, Windows and even UNIX files!

Supports your output device

Use Impostrip On-Demand to print your imposed jobs to proofers, digital printing presses, imagesetters, or platesetters. Using a series of predefined imposition templates, or design your own, On-Demand can output imposed jobs to RIP hot folders as PS or PDF, or print to any PostScript device with our built-in print drivers and it supports PPDs, including ones for the most popular digital printers: AB Dick/Presstek, HP Indigo, Xerox, Xeikon, Konica-Minolta, etc...

Macintosh OS 9, OS X and Windows 2000 & XP

On-Demand allows you to use the equipment you already have in your shop, it easily integrates into your existing workflow allowing you to save time and print more jobs more efficiently! (There are some differences between the Macintosh and Windows versions.)

Easy imposition template making

Use predefined templates bundled with Impostrip On-Demand or use Origami to create new imposition templates. Origami is a virtual paper folding tool that allows you to fold your sheet on screen, once done; Origami generates your new template automatically with pages in the proper imposed order and orientation. With crop marks and fold marks automatically in place you can easily add a color bar to your template. On-Demand allows you to make, modify and save templates and re-use them for other jobs.

Advanced Hot folder automation for profitable short runs

Create a Hot Folder workflow in Impostrip On-Demand to automate all your work. Drag and drop files into an active hot folder and On-Demand will automatically create a template and impose the files based on specified bindery and sheet size and send the file to the RIP. Use same Hot Folders for any job size. Increase efficiency with new hot folder options for large VDP work: rename files, print in reverse order or before all files are ready.

Control

On-Demand provides the professional features you expect to manage an imposition workflow, including full control over page position, bleed, page-spread and page scaling. On-Demand also has support for punch systems integrated in today's imagesetters. On-Demand supports all standard bindery types for your imposition - saddle stitch, perfect bound, repeating booklets, punched for wire-O or spiral bound documents, even right-side and calendar binding.

Automated Cut and Stack

On-Demand simplifies Cut and Stack by automatically splitting jobs into pre-determined number of stacks.

Up and running quickly

On-Demand comes bundled with a free Quick Start training video. The short video follows a step-by-step process of imposing and printing a file.

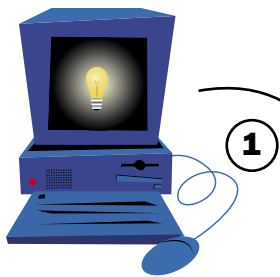

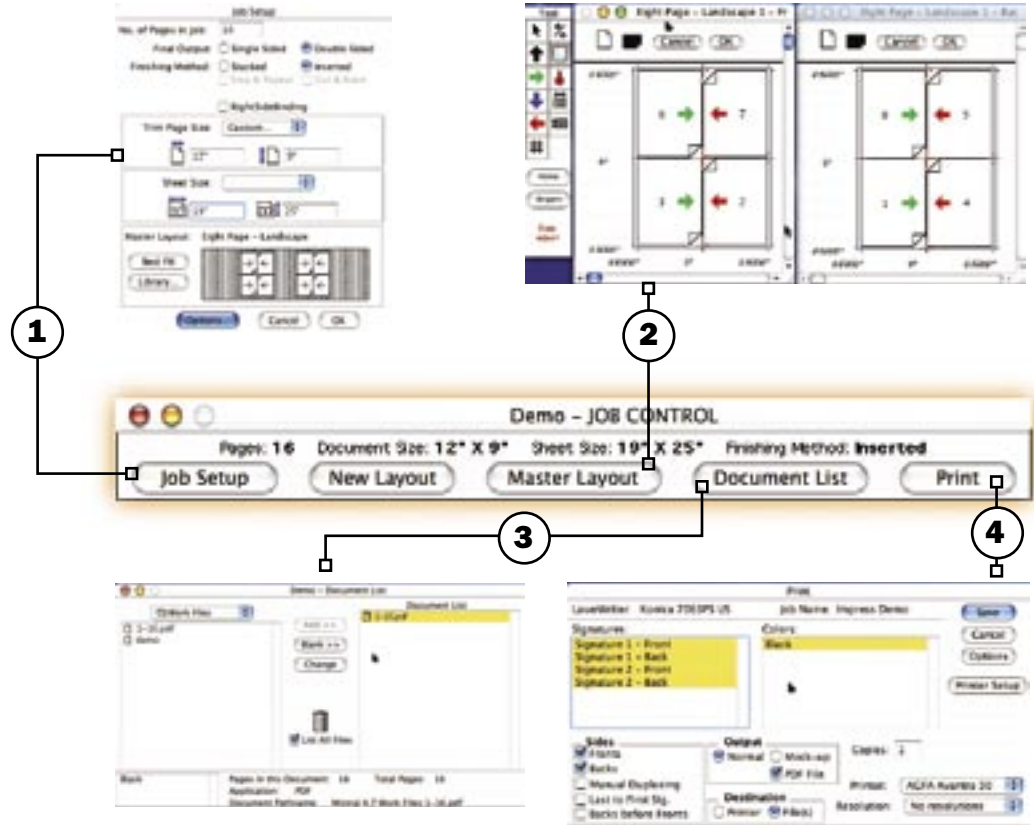

FREE 5 day download demo - Try before you buy!

Try On-Demand and see for yourself just how fast we can help you impose your files, simply visit our Web site to get started.

QuickVIEW

Imposition workflow with On-Demand is simple and intuitive. In four easy steps you can impose your files from the handy Job Control Bar.

- 1. Job Setup Button** - provides access to set the parameters for your print job. Number of pages, bindery...
- 2. Master Layout Button** - allows you to modify your imposition template, page numbering, add crop marks, color bar, custom EPS mark...
- 3. Document List Button** - where you add the files you wish to impose and make last minute page change.
- 4. Print Button** - select your print options, job or plates you wish to print...and you have just imposed a file!

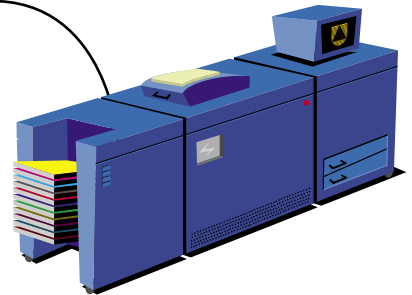

Completely automated with Dynamic Templates and Hot Folders

1
Imposition On-Demand sets the Job Ticket and saves it as Hot Folder on your network

2
Imposition On-Demand Dynamic Template lets you re-use the same template for different binding or different sheet or press size.

3
Advanced Hot Folder automation: Drop a 16-page or a 128-page job in the same hot folder and it creates as many plates or sheets as needed to complete the job. No need to create templates for each job!

4
Imposition On-Demand offers more options for large VDP jobs: print in reverse order, rename files or start print before all files are ready.
