Premiering at Grafik'Art: Presstek and Ultimate demonstrate Imposstrip On-Demand Digital with the DI Digital Press

Montreal, Canada, April 24, 2006 Ultimate Technographics Inc, <http://www.imposition.com/>, the pioneer and leader in digital imposition and Presstek Canada www.presstek.ca, are proud to demonstrate an automated imposition workflow with unprecedented optimization for production onto the KPG-DI 5334 and Dimension 425 CTP– 4 UP.

After an international launch last week at IPEX, Birmingham, UK, it is at a Quebec print show, Graphik'Art, that Ultimate will show an automated multiple project imposition workflow. In tight collaboration with Presstek, Imposstrip On-Demand Digital 5.0 will prove its capabilities in front of the eastern Canadian audience. You will get the opportunity to receive demonstrations of imposed jobs onto the digital press KPG – DI 5334 and onto the Dimension 425 CTP.

Presstek suggests combining both offset and digital in order to make your production profitable. «When a printer hesitates between conventional printing or offset digital », explains Don Taylor, National Sales Manager « there is only one choice permitting him to combine both: KPG - DI 5334 Presstek CTP Dimension 425 - 4 UP. The DI is a high quality item at an affordable price. This combined to a highly automated imposition engine offered by Imposstrip On-demand Digital; you will have production results that guarantee a very good return on your investment. »

Imposstrip OnDemand Digital is the first imposition program to feature Dynamic Imposition, which means the ability to use a hot folder and templates independent of the page size. This means the user can drop A4 pages, letter pages and other sizes in the same hot folder without making different templates for each job. The user can also drop in jobs of different quantity of pages and the job will be automatically imposed. The workflow can be manual or automatic.

“The real imposition needs of today’s printers,” Joanne David, Executive Vice President explains, “are much more demanding than imagined. For automated production that keeps the DI presses and CTP running efficiently simple booklet imposition is not enough. OnDemand digital was designed for automation that matches the needs of the quick turnaround needed with DI presses and CTP for conventional presses, with minimal operator intervention.”

Imposstrip OnDemand Digital is a stand alone product on Windows and Mac that will process PDF and PS files from any source, or work with most workflows through JDF. It can be published on a network and becomes a server application through the hot folder configuration.

Ultimate Technographics and Presstek will be launching Imposstrip OnDemand Digital 5.0 at Grafik'Art (www.grafikart.ca), Laval, QC, on the Presstek equipment: DI et CTP.
Come see us in Booth 421.

A 5 day demo is available on our website: www.imposition.com.
