| Windows | Pentium 4 + | 1 Gb + | 2000-2003 Server, Pro, XP |

A simple automated page pairing imposition workflow solution for newspapers

QuickFACTS

- Simple and intuitive user-interface with page pairing and versioning in one application
- Automated unlimited hot folder workflow or hands-on production
- Single Hot Folder for input files for each queue with up to 9 alternative queues for versioning
- Per side page pairing for more efficient control on BW and CMYK pages
- More imposition page pairing flexibility, features and power with less administration complexity
- Supports PDF, PS, EPS and TIFF IN files, PDF and PS out
- Works with 3rd party workflows using "placement" files for swapping (I.E.. RAMPAGE, Artworker/PCC...)
- Simple customized template creation and unlimited size output, upgrade to Impostrip for customizable book and commercial print template building
- Define specific workflow settings for each queue
- Scalable solution for small or large newspapers
- Supports page duplicates
- Works with what you have in your shop, Windows 2000 Server, OPI systems, proofers, CTF & CTP devices...
- Economical alternative to complex database driven systems, but designed for high capacity workflow
- FREE 5 day download demo and QuickStart training video

Simple automated or manual page pairing imposition workflow

Impostrip Page-Pairing is a simple and intuitive newspaper page pairing workflow that installs on a server in a few quick mouse clicks. Forget about managing complex databases systems that complicate your workflow. With easy to set-up and administer workflow queues, Page-Pairing automatically process files dropped into hot folders across a network. Page-Pairing offers full page and paired page previews, custom imposition template design, scalability to expand output capacity, commercial imposition abilities, and no size limits - Page-Pairing is the NEW, ECONOMIC and INTUITIVE workflow solution for newspapers. Works with Impostrip Jobs, no matter the complexity of the templates. Can be also used in magazine work or automated step and repeat. If you need more imposition page pairing flexibility and less complexity in your workflow - try Impostrip Page-Pairing!

Simple: Green = go, Yellow = waiting for pair, Red = error

One glance at a Page-Pairing workflow queue and you'll immediately know how the workflow is moving along. We identified the chief complaint about existing page pairing workflows was poor user interface design and complex workflows, so we overhauled page pairing usability - the results are a simple intuitive interface using a simple Green, yellow and Red light system to communicate workflow status. But the simplicity of Page-Pairing is more than skin deep - If you're a newspaper prepress professional, you shouldn't have to be a database expert as well. Page-Pairing does the database heavy lifting behind the scenes, simply choose your preferred naming convention for incoming pages and Page-Pairing manages the rest!

Automated or hands-on workflow

Simply click one button to create a new workflow queue in Page-Pairing, create one queue or create as many queues as you wish, each with their own specific workflow preferences. Input the workflow preferences in a simple tabbed menu, and select options, including automatically print paired pages or wait for the queue administrator to release the pages for printing after previewing the pages.

Two solutions in one package: Page Pairing and Versioning with higher flexibility for duplicates, alternate editions, zones...

Because the same day's newspaper is rarely the same paper for everyone, we provide maximum flexibility to handle duplicate pages, alternate pages/editions... customizing your newspaper for each zone just got easier and much easier to approve with full page previews. Different templates needed for different editions, or custom work? Our simple and intuitive template maker complements our selection of standard newspaper templates and allows you to add custom marks for your workflow. Create Templates in any size you wish, your only limit is your output device. Upgrade to Impostrip for industrial strength template design for any book or commercial printing needs.

Alternate output for Black and White or CMYK flats

Other solutions can not do split output to send Black and White and CMYK flat to two workflows, nor they can output Top and Bottom Web independently. With Page-Pairing flat with black only can be output to Composite workflows while the CMYK flats outputs to a In-RIP separation workflow, automatically.

Powerful Naming Convention flexibility

Files are named following their static naming plus variables for page numbers, alternate edition, day, month or year to cover most of the input file naming conventions.

Scalable powerhouse workflow - tested imposition legacy

Small or large printers will appreciate the scalability of Page-Pairing. Using the tested and true Impostrip Server for indexing and printing signatures, Page-Pairing can be scaled to meet unlimited demand by even the largest of newspaper operations for archiving and tracking facility.

QuickVIEW

Page Pairing workflow simple to create and manage!

1. Create a New Q:

a - Name Q, select number of Alternative Editions, Select Imposstrip Server and hot folders

b- Select file naming convention

c- Select Q template

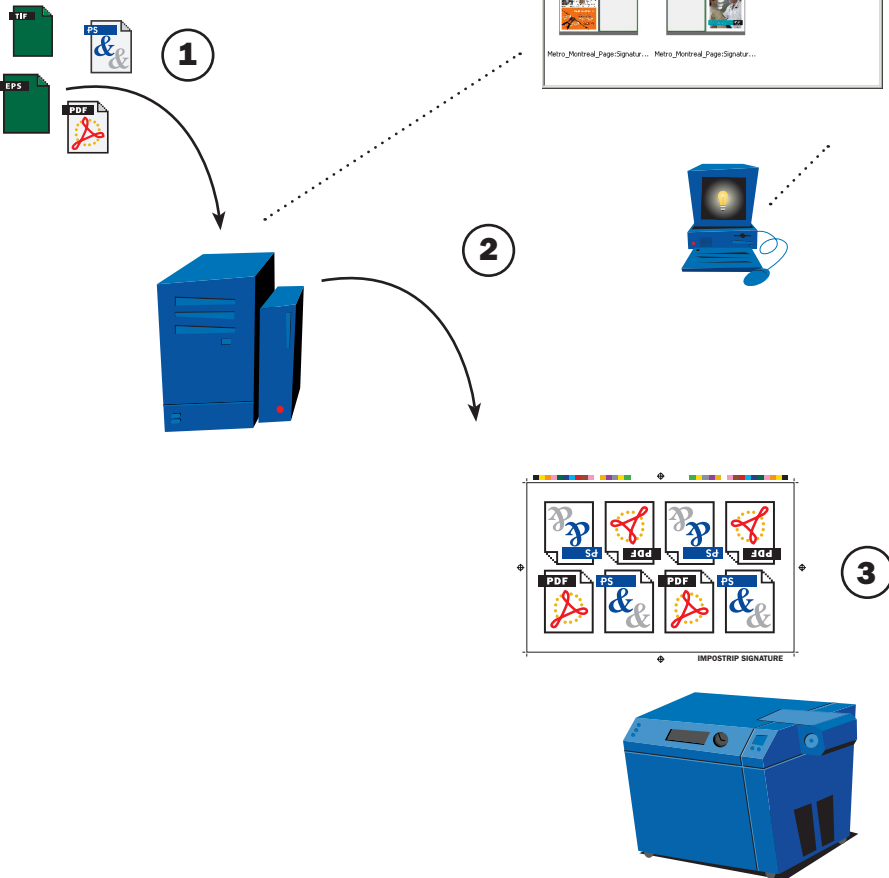

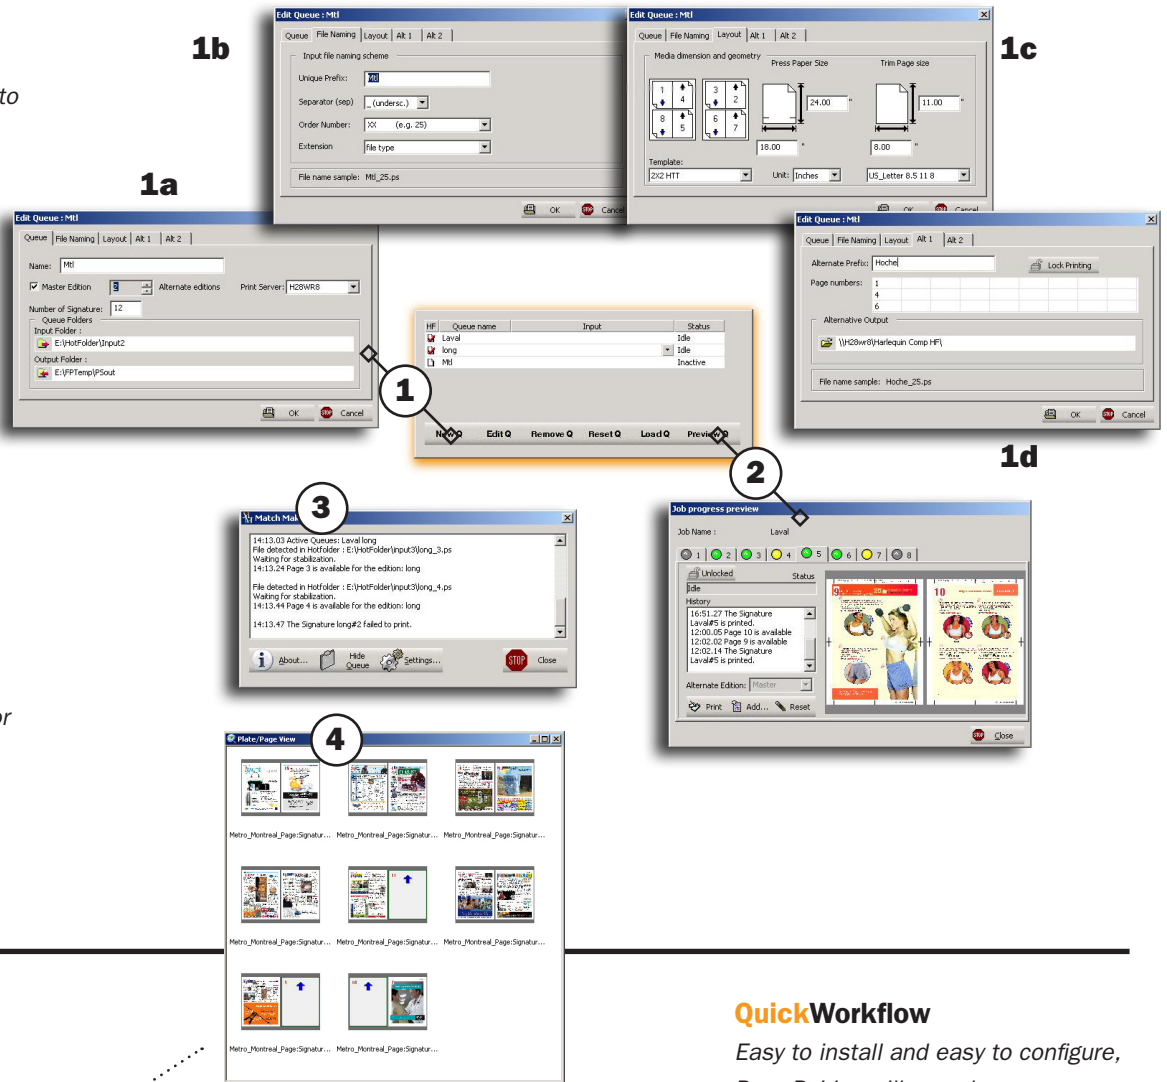

d- Define Alternative Editions

2. Select any Q check box and choose Preview Q to get a preview window for the Q's Progress

3. Page-Pairing Job log tracks and summarizes all jobs

4. Plate view allows to monitor pages that are processed or missing

Four simple steps to creating and managing a page pairing workflow!

QuickWorkflow

Easy to install and easy to configure, Page-Pairing will speed your newspaper workflow.

1. Drag and drop PS, PDF, EPS or TIFF files over a network into a hot folder

2. Page-Pairing will automatically send paired pages to the Imposstrip Server when ready.

3. Imposed pages are sent to the RIP for imaging. Multiple Imposstrip Servers can add capacity to the largest of newspaper workflows.

Workflow complete!
